

Daily Wellness Screening

As a Catholic school community we can safely return to face to face instruction. The reopening of our Catholic schools is critical to our students' academic growth and to their spiritual, social, emotional and physical development.

Of paramount importance is the partnership between our parents and their school's administration, faculty and staff.

Foundational to this partnership is vigilance and the discipline to monitor everyone's health starting with the daily health assessment. The Wellness Survey must be completed and submitted prior to attending school. The Wellness survey calls for daily checks of temperature, virus symptoms, and any exposure to virus positive individuals.

Students and staff must stay home if they are not feeling well. This action coupled with strict adherence to all recommended safety protocols including appropriate social distancing, hand washing and the wearing of facial coverings, will mitigate the exposure to the virus in our schools.

Daily Procedures

1. A daily text and email with a link to the [Google Form Survey](#) will be provided to every parent and staff member. This text and email will be sent out automatically from Swift K-12 at 5AM each morning
2. The survey takes about 60 seconds to complete per child
3. Several Questions must be answered:
 - a) parent email, student name, grade level
 - b) temperature above 100.4?
 - c) close contact report
 - d) Symptom checklist
4. Schools will receive your information but only the principal and school nurse will see your information. Other school staff will have a spreadsheet that only shows the names/grade levels of children allowed to enter the building, with no other confidential information.
5. Students who arrive but are not on the list will NOT be allowed to enter the building.

Typical Symptoms of Covid-19

In addition to fever, signs of COVID-19 illness may include: Feeling feverish, Chills, Cough, Sore throat, Fatigue, Headache, Muscle aches or body aches, Congestion or runny nose, Nausea or vomiting, Diarrhea, New loss of taste or smell, Shortness of breath or difficulty breathing.
